& THE FUTURE OF EDUCATION CONFERENCE

AI ACADEMY WORKSHOP · AIFE BANGKOK 2026

Beyond the AI Lesson Plan

Making your curriculum come to life, and getting your time back

Ariel Dahan
MYP Sciences · Yangon American International School
ariel.dahan2332@gmail.com

YANGON AMERICAN INTERNATIONAL SCHOOL

1st

conference I've ever presented at.

It's only uphill from here, or you'll never see me again.

Today: less of me talking, more of you talking. You'll leave with a plan on paper and a repo to start from.

Where this came from

1. **Expected: 14 teaching hours a week**
   Relaxed, right?
2. **Arrived: nothing to teach from**
   No curriculum, plans or materials. "Is this MYP?" Online-only textbook.
3. **Training: one online course**
   Category 1, a month, squeezed in around everything else
4. **Every week: four classes, four grades**
   Plans, assessments, grading, feedback. No TA. Lab kit from the shops.
5. **Nobody to ask**
   Principals gone, new head of school learning too
6. **Free AI helped, a bit**
   Slow, and not good enough

SO, WHAT CAN WE DO?

Next year: new leaders, still no curriculum coordinator.

Every teacher is their own department.

So I built the system I needed.

Where does your week go?

CURRICULUM COORDINATORS

How much time do you spend on curriculum?

IT DIRECTORS, TEACHERS, ADMINISTRATORS

How many minutes a week go on budget, resources and supporting curriculum?

TEACHERS AND ADMINISTRATORS

How many minutes do you spend planning that work?

2 minutes: pick the question for your role, write your number at the top of your template, then compare with your neighbour.

Today

THE GOAL

Set it up once. Get your time back.

You'll leave with

A plan for your own school's system, on paper

A starter repo to build it from on Monday

1 **How it works** — Chatbot or agent, then the seven parts — 18 min

2 **Your template** — Your school and your first month — 16 min

3 **Hurdles and questions** — Your biggest hurdle, the starter repo — 10 min

Plus three quick chats with your neighbour along the way.

Chatbot or agent?

BOTH USE THE SAME AI. THE DIFFERENCE IS WHERE IT WORKS.

A CHATBOT

Answers in a chat window

Good for

- Quick questions and first drafts
- No setup, free to start

Falls short

- Forgets your school every new chat
- You re-paste context, copy out answers
- One lesson at a time

AN AGENT

Works inside a folder on your computer

Good for

- Reads your school files every time
- Makes real files: plans, worksheets, lists
- Checks its own work; you approve

Falls short

- An hour or two of setup
- Can make mistakes faster, so you review

Ask a chatbot a question. Give an agent a job.

How to start a project like mine

THE SAME $20 PLAN. ONE FOLDER. YOUR TEMPLATE IS THE BRIEF.

WHAT YOU NEED

A $20 plan
Claude or ChatGPT

Its agent
Claude Code or Codex

One empty folder
On your computer or Drive

Today's template
Filled in by the end of this hour

1. **Open the agent in the folder**
   Install Claude Code or Codex, then start it inside your empty folder.

2. **Let it interview you**
   Give it a photo of your template. It asks about your school and writes a START_HERE file.

3. **Ask for one real thing**
   One unit, or this week's lessons. Read it the way you'd read a colleague's.

4. **Fix the rule, not the output**
   When it gets something wrong, add a rule to the folder so it never happens again.

MINE **Started as one folder. Now it plans MYP 1-5 science. Here's the map.**

The whole program on one map

IN

1. **School UI**
2. **Class library**
   - · teaching materials
   - · standards
   - · lab stock list

THE ENGINE

3. **Curriculum generator**
   - · plans around lab stock
   - · standards built in
   - · every version kept

OUT

4. **Lesson package generator**
5. **Teacher preferences**
6. **Lab order list**
7. **Student feedback generator**

Next, one slide per part, using exactly these names.

TALK WITH YOUR NEIGHBOUR · 1 MINUTE

What excites you about this? What are you wondering?

1. **Which part would save you the most time?**
2. **What's the first thing you'd want to ask me?**

Then I'll go through all seven. Watch for the ones with your role on them.

Why these slides are questions

1 2 3

Each part comes with a few questions. I answer them as I walk you through how that part works.

So there's no wall of text for you to read, and no script for me to read off.

1 School UI

SAVES TIME FOR **Teachers · Coordinators · Administrators · IT**

ASK THE ROOM **If you could ask your school one question and get the answer instantly, what would it be?**

1. **Who uses it?**
2. **Who sets it up, and how often?**
3. **What can an admin check without asking anyone?**

EXAMPLE

Type a command

› check standards alignment

› list lab items to order

› compare with last year

2 Class library

SAVES TIME FOR **Teachers · Coordinators**

ASK THE ROOM **What teaching materials are already sitting in your drive, doing nothing?**

1. **What goes into a class library?**

2. **Why does it keep requests short?**

EXAMPLE

My MYP Science library

Built from the textbooks and materials we already teach with, MYP 1 to 5.

3 Curriculum generator

SAVES TIME FOR **Coordinators · Teachers · Lab managers**

ASK THE ROOM **If an accreditation visitor asked where you teach a standard, how fast could you show them?**

1. **How does it plan around what's in the lab?**
2. **How are the standards built in?**
3. **Why keep every version?**

EXAMPLE

Our MYP curriculum

Lab-checked practicals

AERO standards, MYP 1-5

Every old version kept

4 Lesson package generator

SAVES TIME FOR **Teachers**

ASK THE ROOM **Which of these do you make by hand every week?**

1. **How does the curriculum become a lesson package?**
2. **What can a teacher tick?**

EXAMPLE

One lesson, boxes ticked

- ✅ Slides ✅ Worksheet
- ✅ Teacher manual
- ✅ Lab setup guide
- ✅ Scaffolds ☐ Cut-outs

5 Teacher preferences

SAVES TIME FOR **Teachers · ESL and learning support**

ASK THE ROOM **What's the one formatting fix you make on every AI worksheet?**

1. **How does it adapt to each teacher?**
2. **Why not generate the whole term at once?**

EXAMPLE

My preferences

A pencil icon wherever students write.

Long questions split into chunks.

Sentence starters for ESL students.

6 Lab order list

SAVES TIME FOR **Lab and resource managers · Budget holders**

ASK THE ROOM **Who orders lab materials at your school, and how do they know what's missing?**

1. **How does it find the gaps?**
2. **Who uses the order form?**

EXAMPLE

A full year of MYP Science

Our stock list, checked against all 15 units I generated: MYP 1 to 5, a full year.

7 Student feedback generator

SAVES TIME FOR **Teachers**

ASK THE ROOM **How long does it take you to write individual feedback for one class?**

1. **How does student work get in?**
2. **What comes back?**

EXAMPLE

The newest part

Students use nicknames on submitted work. Real names never go to the AI.

What it runs on, and why it gets stronger

ASK THE ROOM **Who here pays for an AI subscription out of their own pocket?**

1. **Why mostly cheap API keys?**
2. **What happens when a smarter or cheaper model comes out?**
3. **What stays the same when the model changes?**

EXAMPLE

Built on $20 a month

$20/month plan, not Max or Pro.

Cheap keys: DeepSeek, Qwen, NVIDIA.

Swap in any API.

TALK WITH YOUR NEIGHBOUR · 1 MINUTE

Who would benefit at your school? What speed bumps do you see?

1. **Which role at your school gets the most time back?**
2. **What would slow it down: people, policy, budget, data?**

Hold on to your speed bump. It goes in box D of your template.

PART 2 · YOUR TURN

Fill in your template: 16 minutes

Teachers: one course. Coordinators and leaders: a department or the whole school. Rough notes are fine.

Four boxes, 16 minutes

A

Your school

4 min

B

What you'd feed it

4 min

C

What you want out

4 min

D

Your first month

4 min

Check-in every 4 minutes. Stuck on a line? Skip it, keep going, come back. Box D ends with a swap.

A Box A: Your school

How many terms, weeks and lessons per unit?

Which framework and criteria? (MYP A to D, AP, IGCSE...)

Which standards must you show evidence for? (AERO, NGSS, national...)

Where would the shared folder live?

CHECK-IN **Which line was hardest to answer? Shout it out.**

B Box B: What you'd feed it

Which teaching materials do you already have? (slides, worksheets, unit plans, textbooks)

Is there a resource list? (lab stock, devices, rooms)

Who keeps it up to date?

Anything that must never go in? (student names, grades)

CHECK-IN **Hands up if your school has a stock list. Now hands up if it's actually up to date.**

C Box C: What you want out

Tick the parts you'd use first (1 to 7 on your template).

Which outputs: digital, printout, cut-outs, manual, setup guide, scaffolds?

What preferences do your students need? (ESL starters, chunked questions...)

What's the first thing you'd generate?

CHECK-IN **Which part did you tick first? Quick hands for each number.**

D Box D: Your first month

Week 1: make the folder, pick your AI.

Week 2: enter the school and one course.

Week 3: generate one unit, approving each step.

Week 4: share it with one colleague.

CHECK-IN **Swap with a neighbour: what's their biggest hurdle, and who could help clear it?**

PART 3 · HURDLES AND QUESTIONS

Where to start on Monday

Your template is the plan. Stay in touch and I'll share the starter repo, or build it yourself from scratch.

TALK WITH YOUR NEIGHBOUR · 2 MINUTES

What's your biggest hurdle?

1. **The one thing most likely to stop this at your school.**
2. **Have you faced a hurdle like this before? What worked?**

Shout yours out. If you've already got past one like it, tell us how.

The starter repo: coming soon

1. The folder structure and a START_HERE file
2. Setup prompts that interview you about your school
3. Templates for units, lessons, worksheets and slides
4. A starter list of checks
5. A bare-bones school UI to build on

WANT IT? EMAIL ME

ariel.dahan2332@gmail.com

I'm still building it. Email me and you'll get it as soon as it's on GitHub.

Or build it from scratch yourself. Your template is the instructions.

WORKSHOP PAGE

Slides, template, feedback

ariel-coder-maker.github.io/#aife

Inside the repo: it's just a folder

START_HERE

The AI reads this first

00_school

Calendar, timetable, policies

01_curriculum

Criteria, standards, unit plans

02_sources

Approved textbooks and materials

03_resources

Lab stock, rooms, devices

04_prompts

Prompts for units, lessons, slides

05_checks

Rules every output must pass

06_outputs

Each teacher's finished work

What I'm building next

IDEAS FROM THIS WEEKEND, AND THE PEOPLE BEHIND THEM

Agentic projects
Applying it in this session

Thanks to Matthew Doige
Shekou International School

Game-based learning
Built into the curriculum

Thanks to Vaughn Littlejohns
Prem Tinsulanonda

Personalised curriculum
Built on each student's interests

Thanks to Mahoma
Shanghai

A sandboxed AI tutor
Students scaffold their own learning

Thanks to Oscar Scafidi
ICS Addis Ababa

Student AI chatbots
Principled use, with guardrails

Thanks to Jenny Knobel
Prem

Your idea next?
Tell me after, or email me.

Your questions

ASK ME ABOUT

- Any of the seven parts
- Something from your template
- Getting the starter repo
- Cost and which AI to use

IF IT'S QUIET, I'LL START

- What's the first thing you'd generate with this?
- Which part would save your school the most time?
- Who at your school would own the shared folder?

THE SEVEN PARTS

1. School UI
2. Class library
3. Curriculum generator
4. Lesson package generator
5. Teacher preferences
6. Lab order list
7. Student feedback generator

Before you go

1

Take a photo of your template now

So you don't lose it. Then upload it to your AI coding agent as your starting point.

2

Email me for the starter repo

ariel.dahan2332@gmail.com · I'll send it as soon as it's ready.
