Set it up once. Get your time back.

Beyond the AI Lesson Plan · AIFE Bangkok 2026
Ariel Dahan · ariel.dahan2332@gmail.com

Teachers: plan one course. Coordinators and leaders: a department or the whole school. Rough notes are fine. Skip a line if it stumps you.

My time now · tick the one for your role, honest guess per week

☐ Curriculum	☐ Budget and resources	☐ Planning	**Time I'd want back**

1 School UI
for every role; school set up once; type a command

2 Class library
drag in what you already teach with

3 Curriculum generator
lab stock, standards built in, every version kept

4 Lesson package generator
tick the outputs; connected to past lessons

5 Teacher preferences
set once, applied to everything; week by week

6 Lab order list
stock list × curriculum → order form

7 Student feedback generator
nicknames only; grading and feedback sheets

A Your school

4 min

This is what you'd otherwise retype into every prompt. Enter it once and every teacher inherits it.

Terms, weeks per term, period length, lessons per unit

Framework and assessment criteria
e.g. MYP A to D, AP, IGCSE

Standards you must show evidence for
e.g. AERO, NGSS, national curriculum

Unit and lesson shape your school expects

Where the shared folder would live
☐ Google Drive ☐ OneDrive ☐ School network
☐ Other

B What you'd feed it

4 min

Your class library and your resource lists. The more real this is, the less the AI invents.

Teaching materials you already have
slides, worksheets, unit plans, textbooks

Resource lists that exist, or need making
lab stock, devices, rooms, budget

Who keeps the school info and lists up to date?

What must never go in?
e.g. student names, grades, personal data

Build your school's AI system

C What you want out

4 min

Part	Use first	Later
1 School UI	☐	☐
2 Class library	☐	☐
3 Curriculum generator	☐	☐
4 Lesson package generator	☐	☐
5 Teacher preferences	☐	☐
6 Lab order list	☐	☐
7 Student feedback generator	☐	☐

Outputs I'd tick

☐ Digital ☐ Printout ☐ Cut-outs
☐ Teacher manual ☐ Lab or setup guide
☐ Differentiation scaffolds ☐ Other _____

What my students need on every page

e.g. pencil icon for answers, chunked questions, ESL sentence starters

The first thing I'd generate

D Your first month

4 min, last 2: swap with a neighbour

Week 1
Make the folder. Pick your AI.

Week 2
Enter the school and one course.

Week 3
Generate one unit, approving each step.

Week 4
Fix what failed. Share with one colleague.

The one rule my first output must always pass

if you can't say it in a sentence, the AI can't meet it

Who approves it before students see it?

My biggest hurdle at my school

the speed bump most likely to stop this

Who could help clear it?

a role at school, or someone in this room

Your setup

Main AI ☐ Claude ☐ ChatGPT / Codex ☐ Gemini ☐ Other _____

When the quota runs low ☐ Cheap API (e.g. DeepSeek, Qwen) ☐ Free tokens (e.g. NVIDIA) ☐ Wait for the reset

Next: the starter repo
Email me and I'll send it as soon as it's on GitHub.
It interviews you, and your answers on this sheet are what you'll give it.
